

Development of a web application for the EnjoyTheRide Inc.

Student : Laurin Weber
Professor : Dr. Christiane Jungius

Summary

- This bachelor thesis aims to discover the operational business needs of the EnjoyTheRide Inc. and develop a web application prototype for a centralized booking, scheduling and payment system.
- The prototype implements functionalities, which are defined together with the company's CEO, which serves as a decision basis in making future investments in its IT-Infrastructure for the upcoming winter season 2021/22..

Conclusions

- Challenging bachelor thesis, as there were few restrictions: missing technical support and little information about the company's operational business model .
- The evaluation of the prototype showed how a modern and centralized solution of the booking, scheduling, and payment process of the EnjoyTheRide Inc. could be solved.
